Test 1: Code 39 symbol with default parameters:

ABC12QJ31

Test 2: get the reference of the previous encoder and typeset two Code 39 symbols on the same canvas, one above to the other:
RTFG746

ZKPQJ31

Test 3: with the same encoder print a symbol, change globally the height, and reprint the same symbol again on the same canvas:
ZKPQJ31

ZKPQJ31

Test 4: do the same in test 3 but change locally parameters as height and text properties:

0123456789

0123456789

Test 5: create a new encoder with a large module value:

02040608
